

ASSIGNMENT 2

NAME : Shalini. R

Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Code:

```
import random
while(True):
    temp=random.randint(10,99)
    humid=random.randint(10,99)
    print("current temperature:",temp)
    print("current humidity:",humid,"%")
    temp_ref=37
    humid_ref=35
    if temp>temp_ref and humid<humid_ref:
        print("Sound Alarm")
    else:
        print("Sound off")
    break
```

Result:

```
main.py  [Full Screen] [Refresh] [Run]
1 import random
2 while(True):
3     temp=random.randint(10,99)
4     humid=random.randint(10,99)
5     print("current temperature:",temp)
6     print("current humidity:",humid,"%")
7     temp_ref=37
8     humid_ref=35
9 if temp>temp_ref and humid<humid_ref:
10     print("Sound Alarm")
11 else:
12     print("Sound off")
13 break
```

Output:

```
Shell
current temperature: 65
current humidity: 80 %
Sound off
> |
```
